

Flower pots

A gardener arranged 24 flower pots on his garden so that the pattern was symmetrical and there were 9 flower pots on each side, (see below).

Are there any other ways of arranging 24 flower pots on each side of the garden so that there are always 9 flower pots on each side?

If the gardener bought an extra flower pot so there are now 25 flower pots, is there a way of arranging all 25 flower pots so there are still 8 flower pots on each side of the garden?
