

Try it!

1. Fill in the gaps:

- $\underline{\quad} + 13 = 29$
- $32 - \underline{\quad} = 8$
- $\underline{\quad} = 30 + 96$
- $45 + \underline{\quad} = 127$

2. Roman was having trouble solving these equations:

- $53 + 34 = \underline{\quad}$
- $84 - 23 = \underline{\quad}$

Can you solve them for him?

3. Write the numbers 7, 9 or 16 in the spaces to make these equations correct:

$$7 + \square = \square$$

$$\square = 16 - \square$$

Apply it!

1. There are 27 children on the school bus. 3 girls get off and 4 boys get off. How many people are still on the bus altogether?

2. Josh has 21 marbles in a bag. He loses 8 of them. Aisha gives him 6 more. How many marbles does Josh have now?

3. Use the bar model to complete the equations below.

56	
18	38

$$\square + \square = \square$$

$$\square + \square = \square$$

$$\square - \square = \square$$

$$\square - \square = \square$$

Fly with it!

1. Roman says "If you add two numbers together, then add the same two numbers in a different order, you get a different answer."

Is Roman correct? Prove it!

2. Which of these numbers can I add 6 to and get a multiple of 10?

34 , 26 , 50 , 64

3. Luca writes down some equations:

$$70 = 100 - 30$$

$$60 = 100 - 40$$

What will be the next 5 equations that Luca will write down?

Can you make up a similar pattern using the numbers 5, 95 and 100?
