

Try it!

1. Fill in the missing details to describe the number 690300

It has ___ hundred thousands
 It has ___ ten thousands
 It has ___ hundreds

2. Roman said the number 350478. Can you read this number out correctly? Now write it out in words.

3. Can you show which of these measurements is greater by using the < or > symbol:

13900	___	13899
23001	___	21003
780327	___	779999
121212	___	122122
908089	___	909980

Apply it!

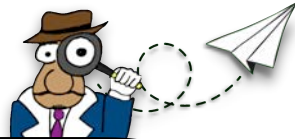

1. Using the digits 0-7, make the largest and the smallest six digit number possible.
 How do you know that these are the largest and smallest numbers that you can make?

2. Aisha wrote down six 6-digit numbers.

328956, 457512, 498873,
 235887, 679224, 327866

Can you place the numbers she wrote in descending order using greater or smaller than symbols?

Fly with it!

1. Roman said that he can order the following numbers by only looking at the first three digits.

235988 238745 236854
 235641 237698

Is he correct? Explain your answer.

2. Josh has made five numbers, using the digits 1,2,3 and 4. But he has changed each digit into a letter. He has written some clues to help you work out what each letter stands for.

abcdd
 dcbac
 adcad
 bdcba
 babdc

Number 2 is the smallest number.
 Number 5 is the largest number.
 The digits in number 3 add up to 10.
